

Four Eyes Insight (FEI) have been helping healthcare organisations identify and realise the true productivity potential of their operational and clinical teams since 2013. Their approach identifies, targets and rectifies those well-known, but difficult to sort, operational challenges that routinely frustrate managers and clinicians. They utilise best practice knowledge, honed from delivering many successful improvement programmes across the NHS, to support service providers in structuring and delivering optimal clinical services. Established as software and consultancy firm, their teams use a combination of expert engagement, comprehensive analytics and operational improvement software to support clinical and managerial teams in delivering higher levels of productivity.
